

Authify Posts — Mini Project with Node.js

This mini project demonstrates a secure authentication system using **Node.js**, **Express**, **MongoDB**, **JWT**, and **bcrypt**, with a clean **EJS + Tailwind** frontend.

Users can register, log in, and access a protected dashboard. The project will later include a **Post schema** for user-created posts.

🚀 Features

- User Registration with bcrypt password hashing
- JWT-based Login Authentication
- Cookie-based session handling
- Protected Dashboard Route
- Logout functionality
- EJS views styled with Tailwind CSS
- Upcoming: Post Schema for Data Association

🛠️ Setup

1. Clone this repository

```
git clone https://github.com/Coderudit05/authify-posts-min-project-with-  
Node.js.git  
cd authify-posts-min-project-with-Node.js
```
